

# Includes

Includes allow you to insert the contents of one Pug file into another.

```
// - index.pug
doctype html
html
  include includes/head.pug
  body
    h1 My Site
    p Welcome to my super lame site.
    include includes/foot.pug
```

```
// - includes/head.pug
head
  title My Site
  script(src='/javascripts/jquery.js')
  script(src='/javascripts/app.js')
```

```
// - includes/foot.pug
footer#footer
  p Copyright (c) foobar
```

```
<!DOCTYPE html>
<html>

<head>
  <title>My Site</title>
  <script src="/javascripts/jquery.js"></script>
  <script src="/javascripts/app.js"></script>
</head>

<body>
  <h1>My Site</h1>
  <p>Welcome to my super lame site.</p>
  <footer id="footer">
    <p>Copyright (c) foobar</p>
  </footer>
</body>
```

```
</html>
```

If the path is absolute (e.g., `include /root.pug`), it is resolved by prepending `options.basedir`. Otherwise, paths are resolved relative to the current file being compiled.

If no file extension is given, `.pug` is automatically appended to the file name.

## Including Plain Text ¶

Including non-Pug files simply includes their raw text.

```
//- index.pug
doctype html
html
  head
    style
      include style.css
  body
    h1 My Site
    p Welcome to my super lame site.
    script
      include script.js
```

```
/* style.css */
h1 {
  color: red;
}
```

```
// script.js
console.log('You are awesome');
```

```
<!DOCTYPE html>
<html>

<head>
  <style>
    /* style.css */
    h1 {
      color: red;
    }
  </style>
</head>

<body>
  <h1>My Site</h1>
  <p>Welcome to my super lame site.</p>
  <script>
    /* script.js */
  </script>
</body>
</html>
```

```
    }  
  </style>  
</head>  
  
<body>  
  <h1>My Site</h1>  
  <p>Welcome to my super lame site.</p>  
  <script>  
    // script.js  
    console.log('You are awesome');  
  </script>  
</body>  
  
</html>
```

## Including Filtered Text ¶

You can combine filters with includes, allowing you to filter things as you include them.

```
//- index.pug  
doctype html  
html  
  head  
    title An Article  
  body  
    include:markdown-it article.md
```

# article.md

This is an article written in markdown.

```
<!DOCTYPE html>  
<html>  
  <head>  
    <title>An Article</title>  
  </head>  
  <body>  
    <h1>article.md</h1>  
    <p>This is an article written in markdown.</p>  
  </body>  
</html>
```
